

# ZOOM WHITENING

What you need to know...

PHILIPS  
**ZOOM!**

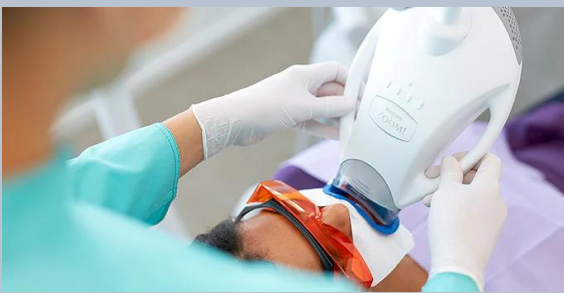

## WHAT IS ZOOM! WHITENING?

ZOOM! Whitening is a safe and effective alternative to teeth whitening, that could bring your tooth colour up to 8 shades whiter in one session.

## HOW DOES IT WORK?

Once your teeth are cleaned, an advanced whitening gel is applied to the tooth surface. Now for the fun part, an LED light is positioned over the mouth to accelerate the process and within 3-4 15 minute applications, your session is complete..

## WHAT DO I NEED TO DO AFTER MY SESSION?

Once your in-chair ZOOM! Whitening session is complete, your hard work here is done. You will be supplied with a take home kit for any sensitivity. For the best results, we suggest avoiding food that may cause staining for 48 hours post treatment.

## IS ZOOM! WHITENING FOR ME?

Zoom! Whitening, like most whitening techniques, is not for everyone. It is recommended to have a consultation with one of our dentists prior to booking an appointment, to ensure you will receive maximum results.
